How to use cookie files

Cookie files are used to ensure effective and safe operation of websites and improve visitors' and Users' user experience. The information obtained using cookie files does not allow for a particular user to be identified. It can also be used for marketing purposes.

Cookie files we use

Session cookie files are stored in your browser until you leave the website.

Persistent cookie files are stored in your browser when the session is over.

First party cookies are cookie files related to the master domain.

Third-party cookies are cookies from the other domain.

Cookie files management

You can delete the cookie files stored on your device

Note: When cookie files are deleted, you will automatically log out of accounts on most sites.

Google Chrome

- Get into Menu → History and click «Clear History».
- In the window that appears, specify «All time» period and check only “Cookie files and other website data».
- Click «Clear History»

Internet Explorer

- Get into Service menu → Browser Options → General.
- In «Browser Log» block, click «Delete».
- In the window that appears, check only «Cookie files and website data» line and click «Delete» button.

Microsoft Edge

- Get into Parameters menu.
- In «Clear browser data» block, click «Select items to be cleared».
- In the window that appears, check only «Cookie files and stored website data» line and click «Clear» button.

You can also choose not to store cookie files on your device changing appropriate browser settings.

Google Analytics

We use the Google Analytics service developed by Google Inc. («Service»), which allows us to collect and analyze statistical web usage and visitors' behavior data. This helps us better understand visitors' needs and interests and improve our HED based on this information. The information obtained using the Service does not allow for particular users to be identified.

You can disable data collection using [Google Analytics Blocker](#)
